ATS Resume Analysis Report

Overall Score: 73%

Section-wise Scores:

Skills: 70%
Experience: 60%
Education: 90%

Detailed Breakdown:

Skills: 70%
Experience: 60%
Education: 90%
Overall: 73%

Breakdown:
1) Skills (70%): The skills section is a mix of relevant technical terms (Python, IoT, SQL, Machine Learning, REST APIs) and soft skills (Problem solving). This is good for ATS parsing. However, the formatting is inconsistent. Some skills are listed as categories ("Tools:", "Database:") which an ATS might not parse correctly into individual skills. Listing the specific tools (Git, MongoDB, etc.) directly would be more effective. The inclusion of "Digital Marketing" and "UI/UX Design" is relevant given the experience described.

2) Experience (75%): The experience section contains strong action verbs ("Founded", "Developed", "Managed") and quantifiable achievements ("increased client engagement by over 40%"), which are excellent. Significant deductions are due to the extremely short duration of the "HR Intern" role (one month, listed as May 2024 to May 2024), which may be perceived as an error or a very brief engagement, reducing its impact. The "Founder & Ceo" role demonstrates initiative but lacks specific, quantifiable details about business scale or client results beyond the engagement metric.

3) Education (90%): The education section is clear and strong. It includes the degree name (B.Tech), the specific and highly relevant field of study (Artificial Intelligence & Data Science), the institution name, and a very high GPA (9.6). The inclusion of the anticipated graduation date (Jul 2027) is standard for a current student. This section is easily parsed and highly favorable for an ATS.
